

FUNCTIONAL REQUIREMENTS DOCUMENTATION

FEATURE OVERVIEW & OBJECTIVES

Feature Owner: Asef Ajmain

Problem Statement: Product managers and developers lack clear visibility in user retention and the digital drop-off points, which makes it difficult to pinpoint how long the user stays on the application before leaving or what causes the user to exit the session. To find this out, a CSV dataset has been gathered to expose where the platform(s) lose user engagement.

EPIC / FEATURE SUMMARY

Bites&Co users are abandoning their sessions at a 12% higher rate than industry average due to mandatory account creation. The addition of a guest account will adhere to the same functions as an account but without perks of an account: adding to cart, paying for items, delivering to address. This also gives first-time users a chance to browse the app/website before committing to an account.

Bites&Co users are abandoning their accounts at a 15% higher rate than industry average due to their carts not saving. The addition of an auto save feature will completely nullify this pain point. It reduces the users frustration of having to re-add their items to their cart; it also reduces the user's need to commit to their items because they know the cart won't save.

DETAILED USER STORIES & ACCEPTANCE CRITERIA

US-101 - Guest Checkout

As a first-time user, I want to browse and checkout without creating an account, so that I can complete my order quickly without committing to signing up.

Acceptance Criteria:

- User can browse menu items without logging in
- User can add items to cart as a guest
- User only needs an email and delivery address to checkout
- System does not force account creation at any point during checkout

-

US-102 - Guest Order Confirmation

As a guest user, I want to receive a confirmation email after placing my order, so that I have a record of my purchase without needing an account.

Acceptance Criteria:

- System sends confirmation email to the address entered at checkout
- Email contains order summary, total, and estimated delivery time
- Email is sent within 60 seconds of order being placed

US-103 - Cart Saving

As a returning user, I want my cart items to still be there when I come back to the app, so that I don't have to re-add everything from scratch.

Acceptance Criteria:

- Cart items are saved automatically when user exits the session
- Items remain in cart for up to 24 hours
- User sees a notification that their cart has been saved upon returning

US-104 - Cart Expiry Warning

As a returning user, I want to be notified before my saved cart expires, so that I don't lose my items without warning.

Acceptance Criteria:

- System sends a push notification 2 hours before cart expires
- Notification includes a direct link back to the cart
- If cart expires, user sees a message explaining why items were removed

-

GLOBAL OUT-OF-SCOPE ITEMS

- Out of stock feature
- Payment fails
- Checkout with empty cart
- Invalid email
